REASONS FOR ALLOWANCE

Claims 1-22 and 24-32 are allowed.

The following is an examiner's statement of reasons for allowance: The prior art teaches a user authentication method (Fig. 4b) which uses an identifier 28, a password 30, and a biometric sample 32 to grant a user 26 access to a database. The prior art fails to teach an information providing device arranged in a multi-function peripheral system including multiple image formation applications and a platform, the platform including an OS and at least one control service to control execution of a requested processing according to a function call from one of the image formation applications. The prior art does not explicitly disclose generat[ing] an authentication merge ticket including data indicating at least one of an authentication provider name, a term of validity of the ticket, an authentication domain name, and user attributes, the authentication merge ticket being a unified information item generated by combining the first user information item and the second user information item based on the predetermined identification data. The prior art instead discloses that a statistical equivalence score is generated from the comparison of a current biometric sample (S') with a decrypted biometric model (T). A decision is made to determine if the computed score is acceptable. If not, the user's authorization state is declared as failed, otherwise, an acceptable score will result in granting the individual access. The score according to Gennaro is generated from the comparison of the current biometric sample (S') with the decrypted biometric model (T), and it is merely compared with a threshold to determine if the user is granted to access the database. Conversely, the authentication merge ticket (e.g., "merge ticket" created by the merge

provider 16) according to the claimed configuration is a unified information item generated by combining the first user information item (e.g., "master primary ticket" created by the merge provider 16) and the second user information item (e.g., "authentication primary ticket" created by the password authentication provider 17). The authentication merge ticket generated is then used to limit the range of validity over the plurality of information providers.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
